

Front End Developer - Job Description

July 2019

Paul Street
Front End Manager
paulstreet@fsbtech.com

Job Title: Front End Developer

Job Summary:

A skilled front end web developer is required to join our Front End team producing innovative sports betting products in Central London.

Experience working in the sports betting / gaming industry would be beneficial but not a must. The ideal candidate will be joining and collaborating with the existing front-end team.

Demonstrating the ability to work across different areas and stages of web product development: understanding business requirements; JavaScript development; testing; applying changes to customer environments.

Responsibilities and Duties:

- Developing new features within the existing product framework by applying appropriate coding patterns
- Identifying and fixing bugs
- Accurately estimating own development work
- End-to-end testing
- Reviewing other developer's code and mentoring less senior developers
- Handling direct customer contact on occasion
- Performing live customer releases
- Providing third tier technical support (including out of normal office hours as required)

Skills and qualifications:

Essential:

- Good JavaScript ES6 specification knowledge
- Experience of testing methodologies, ideally using Jest or other JavaScript unit tests
- Understanding of good website design and mobile-first principles
- Understanding of JavaScript bundler processes (CommonJS, AMD, ES6)
- GitHub

Beneficial:

- Understanding of SEO considerations and conversion/retention pixel based tracking systems
- Marionette (Backbone) framework
- WebSockets
- Ext JS (Sencha)
- Cordova
