

Lead React Developer

As a Lead React Developer, you will be responsible for managing a remote team, implementing key functionality and reporting to the Front End Manager. You will collaborate closely with Front End Developers, Back End (Java) Developers as well as Project Managers and other supporting stakeholders. The role is an excellent opportunity to take the leading role in a range of projects, both customer facing and back office tools, in an industry with many exciting technical challenges to solve.

Responsibilities:

- Delivering new web applications and features using latest techniques and technologies
- Liaising with the key internal stakeholders and maintaining clear communication channels throughout the software development lifecycle
- Interpreting and scoping requirements to deliver efficient, functional, fully tested and optimized solutions
- Managing remote development team, providing guidance and managing their pipeline and deliveries

You need to be / to have:

- Thorough understanding of React JS and Redux
- Educated to at least undergraduate level in technology or a related discipline
- Excellent verbal and written communication skills
- Experience of developing and maintaining optimized web applications
- A committed and flexible approach to work
- HTML, CSS with strong Javascript knowledge
- Strong debugging skills
- Experience using Webpack or similar
- Experience writing unit testing (Jest)
- Solid understanding of OOP and design patterns
- Understanding of RESTful APIs and Websockets
- Experience with NodeJS with Express
- Knowledge of SEO best practices

Nice to have skills / knowledge:

- NextJS
- Server side rendering
- MOBX

FSB having its dedicated first line support, part of your responsibilities is to be a support reference by providing second and third line coverage.
