

# Senior C# Developer

## About the role:

As a Senior C# Developer, you will be working on developing FSB's retail betting product. The product is deployed onto both SSBT (Self-Service Betting Terminals) and EPOS terminals (Electronic Point of Sale).

## Responsibilities:

- Writing efficient code following FSB's high standards
- Working closely with existing developers (both C# and platform developers), Business Analysts, Project Managers, UI/UX Specialists and QA Testers
- Helping other team members by providing technical guidance and code-reviewing their assignments
- Collaborating with other FSB's employees and external partners to fulfil assignments
- Demonstrating a proactive approach to continuously improve FSB's retail product
- Carry out any other reasonable duties within the remit and expected capabilities of the role, as requested by your line manager

## Requirements:

- The application has many complex user interface components implemented with complex WPF (Windows Presentation Framework) structures. Therefore, it is essential that you possess a deep understanding of this specific technology
- An in-depth knowledge of the following technologies is essential for the role:
  - C#
  - .NET
  - WPF / XAML
  - MVVM Design Pattern
  - Asynchronous programming (async/await)
  - LINQ (Language Integrated Query)
  - REST/JSON
  - Git
